

ABSTRACT

A card support assembly includes at least one support member, a plurality of printed heat generating circuit cards and at least one flow control member. The circuit cards are coupled to the support member and extend non-parallel from
5 the support member. The plurality of cards, collectively, have a front edge longitudinally spaced from a rear edge. The at least one flow control member faces the at least one support member with the cards therebetween. The at least one flow control member is substantially imperforate from the front edge to the rear edge.
